

The Hidden Truth

How statistics, definitions and flip-flop policies have sold the pandemic

Did you know:

- COVID-19 has **99.7% survival rate** .
- Deaths globally have occurred predominantly when **1 to 3 comorbidities** exist. Meaning likely the virus alone won't kill you!
- CDC quietly updated COVID-19 death numbers on 19 August 2020 reporting 94% had comorbidities, only 6% died of COVID-19.
- In the UK a COVID-19 death is recorded as anyone who died within 28 days of a positive PCR test even if a heart attack!
- The **pandemic fear** has been built on the results of fraudulent screening **PCR tests**, tests not designed to diagnose. Amplification >35 cycles results in 97% false positives. Cycle thresholds (Ct) of 40 to 45 were used in 2020 globally to achieve a COVID-19 positive case - many had no symptoms!
- WHO changed the **PCR test** criteria **AFTER** the vaccines were approved for emergency use and reported cases had "escalated".

Cycle threshold (Ct) for CV19 PCR test

Ct < 25

Likely true positive

Ct 35 - 45

97% chance of false positive

In 2020, globally, Ct for PCR tests were set 40-45 Ct

- **Death certificate** guidelines were altered in March 2020 in Australia & USA, for the first time in history an "**assumed**" cause of death was allowed.
- Hospitals compensated \$ greatly for COVID claims.
- WHO changed the **definition of a "pandemic"** in 2009 - lethality removed as a criteria.
- WHO changed their **definition of "herd immunity"** on Oct 15, 2020 to say it can only be achieved with a vaccine, then changed it back on Dec 31, 2020 to include natural infection.
- Life-saving early treatments have been suppressed. Clinical trials done for late treatment only - too late for the drugs to demonstrate effectiveness!

The Job you just gotta have - no questions please!

- All COVID-19 vaccines in Australia are under **Provisional Registration**, this means they are still experimental. "*The largest human vaccine trial in human history*" stated Greg Hunt, Australian Health Minister.
- Jobs using **mRNA technology** have never been used before as a "vaccine" in humans.
- Coronavirus vaccines have always failed animal studies - animals died when challenged, a phenomenon known as antibody dependent enhancement or **pathogenic priming**. How will those jabbed fair in 6-18 month time when they encounter the common cold?
- Vaccine trial duration was only 2 months, after which the placebo control group was eliminated! So no long-term safety trial is now possible. The population is now the trial.
- **COVID-19 jabs won't stop infection** or, **transmission** of SARS-CoV-2, the only benefit may be to reduce disease symptoms (aka COVID-19).
- Big Vaccine are all **exempt from legal liability** for injury or death resulting after COVID-19 jabs.
- Nuremberg code **obligates informed consent** when taking part in a medical experiment.
- Reported Adverse events following COVID-19 vaccinations are overwhelming, they include many life long injuries and deaths.
- CDC now only reporting **breakthrough cases** that are fatal or require hospitalisation! This will help the vaccines "appear" to be working.
- Fact: Philanthropist's who sponsor global "health" agencies have markedly **increased their wealth** as a result of this pandemic.
- Fact: Big Pharma is losing money on drugs (less new compound in the pipeline, and law suit costs) so vaccines (biologics) are their profit saviour - they have no liability and if **vaccine passports** get mandated, they have a gold mine ahead of them.

Follow the money!

Adverse Events following COVID-19 jabs vs CV19 Deaths to date

	Job Death	Job Side Effect	CV19 Death
TGA ¹	210	22,031	910
UK ²	1,213	246,970	127,000*
CDC VAERS ³	4,201	227,805	609,544

¹tga.gov.au/periodic/covid-19-vaccine-weekly-safety-report-27-05-2021

²Yellow Card Scheme 19th May 2021

*Died "within 28 days of positive test for coronavirus"

³Reported on The Highwire episode 217, 27/5/2021

Are the CV Jabs 95% effective or 0.76%? The Absolute Risk reduction of the Pfizer jab less than 1% effective

Pfizer trial consisted of 43,448 participants split into 2 groups: placebo and vaccinated = 21,724 each.

Only 168 of the trial subjects got infected and these were used to report the vaccine's effectiveness. 160 in the placebo, 8 breakout cases in the vaccinated. 8 = 5% of 160, therefore **the Relative Risk** of the vaccine is 95% effective at preventing COVID-19.

The risk of getting infected with no treatment minus the risk after receiving the vaccine is **the Absolute Risk** which is 0.8% minus 0.04% **giving 0.76%**.
